Ordering Information **ibc**

Fluorophore(s)

- Consult our Fluorophore Reference Table (pages 6 and 7) or the **Curvo-matic** on our website for excitation and emission spectra as well as recommended Omega filter sets.

Application

- What is most important in your application—bright signal, dark background, color discrimination, or high signal-to-noise? While no one design can optimize for all dimensions, many designs provide a solution that gives good overall performance.
- Does your application require customized reflection and transmission specifications for your dichroic?
- Does your application require “imaging quality” filters?

Light Source

- What is your light source—mercury, xenon, laser?
- Some filter sets will perform better with a given light source.

Detector

- Specify your detector—CCD, PMT, CMOS, film, eye.
- Detectors have wavelength specific sensitivity that may affect filter set performance.
- Filter set blocking strategies are designed to optimize performance for different detectors.

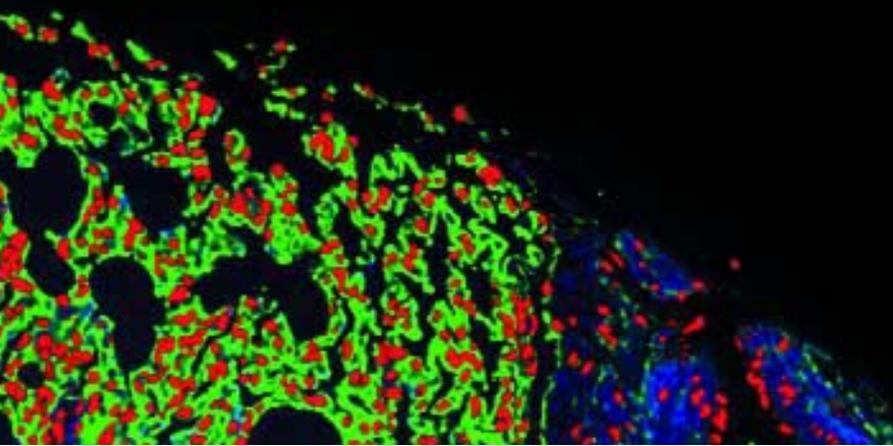

Microscope

- What is the make and model of your microscope, instrument, filter wheel, or slider? We manufacture filters to fit all available instruments and holders.
- We supply holders for most microscopes and also mount filters in customer supplied holders.
- Specify if filters are to be mounted in a filter holder.

Further Reading

If you would like more information on filter set selection, see the technical section of our website for pdf files of the below articles.

- “The Right Filter Set Gets the Most Out of a Microscope” from the January/February 1999 issue of *Biophotonics International*.
- “Optimize Your System with the Right Filter Set” from the November 2002 issue of *Biophotonics International*.

Filter Set Features

Filter Set General Features

- Designed for overall optimization of signal-to-noise, brightness, and multi-color discrimination.
- Excitation & emission bands optimized for color perception.
- Optimized for system speed of microscopes.
- Holders/cubes available to fit most microscopes.

Excitation Filter Features

- Bandpass placement maximizes excitation energy while minimizing emission band crossover.
- Blocking from UV to the limits of CCD detection (1150nm) to minimize background.
- Blocking design in some filters significantly increases filter life by reducing transmission where not needed.
- Designed for extreme heat tolerance.
- Protected high-phase thickness coatings for superior spectral control and environmental stability.

Dichroic Beamsplitter Features

- Steep cut-on slopes optimize excitation and emission performance while maximizing signal.
- Polished to precise specifications to minimize wavefront distortion for better reflection.
- Anti-reflection coatings to increase transmission and enhance image sharpness.
- Fused silica substrates for reduced auto-fluorescence.
- Surface coatings with high durability.

Emission Filter Features

- Bandpass/longpass placement maximizes emission signal while minimizing excitation band crossover.
- Polished to precise specifications to minimize wavefront distortion, beam deviation, and pixel shift.
- Anti-reflection coatings to increase transmission and reduce eyepiece back reflection.
- Standard thickness to minimize registration shift when switching filter sets.
- Blocking design optimized to maximize emission signal.

Zero Pixel Shift Sets

A selection of filter sets are available in a Zero Pixel Shift (ZPS) option for those demanding multi-labeling applications that require critical registration. To order, add ZPS to the filter set part number.

- The ALPHA Vivid ZPS sets are recommended for multi-color applications and result in better transmission and discrimination than traditional multi-band sets. (See page 9.)
- The M-FISH ZPS sets are recommended for applications such as M-FISH (fluorescence *in situ* hybridization), CGH (comparative genomic hybridization), SKY (spectral karyotyping), and co-localization studies. (See page 16.)

Filter Descriptions & Nomenclature

Excitation & Emission Filters

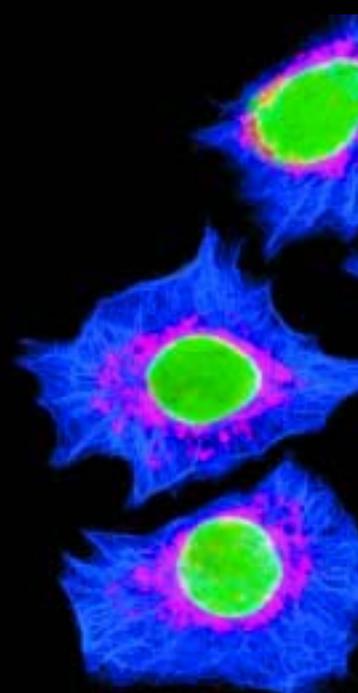

Note: FWHM or Full Width Half Maximum is defined as the bandwidth at 50% of the maximum transmission of the filter.

Filter Design

Bandpass filters vary in the steepness of their edges and the depth of the blocking outside the passband.

- **3RD**: 3RD Millennium Filter designs are manufactured using proprietary ALPHA technology and Omega's patent-pending hermetic assembly.
- **AF**: ALPHA Filter designs are manufactured using Omega's proprietary technology resulting in extremely steep edges, precise edge placement, and extremely high attenuation >OD 10.
- **DF**: Discriminating Filter designs have 6 or more interfering cavities, resulting in a bandpass filter with rectangular shape, very steep edges, and very deep blocking up to Optical Density (OD) 6 outside the passband.
- **WB**: Wide-Band Filter designs are 4 & 5 cavity designs with FWHM greater than 30nm and up to several hundred nanometers.
- **NB**: Narrow-Band Filter designs are 2-cavity designs with FWHM typically between 0.2 and 8nm.

Dichroic Beamsplitters

Note: Cut-On or cut-off wavelength is defined as the wavelength at which the dichroic is at 50% of its maximum transmission value. While defined by the cut-on or cut-off wavelength, the wavelength ranges of the reflection and transmission bands are more critical to dichroic performance.

Filter Design

Dichroics are used at non-normal angles of incidence (typically 45 degrees), highly reflecting one specified spectral region while optimally transmitting another.

- **LP**: Longpass designs transmit wavelengths longer than the cut-on and reflect a range of wavelengths shorter than the cut-on.
- **SP**: Shortpass designs transmit wavelengths shorter than the cut-off and reflect a range of wavelengths longer than the cut-off.
- **DC**: Dichroic designs provide wide regions of both transmission and reflection, exhibiting a high degree of polarization along with a somewhat shallow transition slope.
- **DR**: Dichroic Reflector designs provide a steep transition slope, low polarization, a wide region of transmission, and a limited region of reflection.
- **DCXR**: Dichroic designs that provide extended reflection regions.

Miscellaneous

- **DB**: Dual-band filter designs have two passbands and two rejection bands.
- **TB**: Triple-band filter designs have three passbands and three rejection bands.
- **AR**: Anti-reflection coatings are used on many filters to increase transmission and reduce back reflections.
- **OG**: Orange Glass is longpass absorption glass from Schott with varying spectral profiles.

Fluorophore Reference Table

This reference table contains the most common fluorophores along with recommendations for filter sets. For the most comprehensive and up-to-date fluorophore and filter set information check the [Curvomatic](#) on our website. The Curv-o-matic is an interactive database of fluorophore absorption and emission spectra, along with filter set recommendations and accompanying filter spectral curves. Filter set data is available as downloadable ASCII files.

Key: **Red** = ALPHA Vivid sets (page 9) **Blue** = Vivid Plus sets (page 10) **Purple** = Vivid Standard sets (page 11)
Teal = Vivid Classic sets (page 12) **Black** = special application sets

3RD Millennium Sets

Our patent-pending 3RD Millennium filters offer the advantages of surface coatings, along with the benefits of extreme phase thickness coatings and automated manufacturing. At the heart of each filter is a hermetically-sealed assembly which protects the dielectric coatings and eliminates the environmental instability of surface coatings. The physical assembly eliminates polymer adhesives, minimizing the potential for photodamage and thermal instability. The result is longer filter life, increased transmission, reduced parasitic fluorescence and significantly reduced Transmitted Wavefront Distortion (TWD). The 3RD Millennium line incorporates CNC, robotics, and refined process resulting in a high degree of manufacturing consistency.

Application

Highest performance sets for seven common fluorophores

Design Features

Manufactured using Omega's patent-pending hermetic assembly and proprietary ALPHA technology for superior performance and longer filter life. 25mm standard ring size only.

Excitation Filters

3RD-F7	Cy5®	Exciter Dichroic Emitter IR Blocker	3RD/570-645 XF2072 (650DRLP) 3RD/660-730 3RD/B11

Microscope Compatibility: 25mm standard ring fits the following microscopes: Nikon Eclipse: Olympus IX, BX; Zeiss Axio Sliders, Turret, and Plus

Filter Specifications: Assembly Diameter: 25mm Assembly Thickness: 5.5mm Substrates: SiO₂ with a broadband anti-reflection coating

Note on IR Blocker: An additional filter may be required to extend attenuation to the limits of the detector (1150nm for silicon) and to reduce the heat load on the optical system. Many lamp housings and detectors have existing filters to remove long wavelength energy.

Standard Blocker Sizes: 18mm, 25mm, and 32mm. Please specify size when ordering. Custom sizes are available.

Patent-pending Assembly

- Improved Filter Life
- Improved Environmental Stability
- Fused Silica Substrates

Optical Epoxy Eliminated

- Reduced Auto-Fluorescence
- Improved Parallelism and Flatness
- Improved Heat Tolerance

ALPHA Filter Components

- More Accurate Band Placement
- Steeper Edge Slopes
- Higher-Throughput

* **Zero Pixel Shift (ZPS) Sets:** A selection of filter sets are available in a Zero Pixel Shift (ZPS) option for those demanding multi-labeling applications that require critical registration. To order add ZPS to the filter set part number. There is an additional charge of \$100 for this option. The ALPHA Vivid ZPS sets are recommended for multi-color applications and result in better transmission and discrimination than traditional multi-band sets.

Application

High signal-to-noise imaging applications

Design Features

ALPHA Technology excitation and emission filters provide steep edges, increased blocking, and reduced auto-fluorescence

Excitation Filters

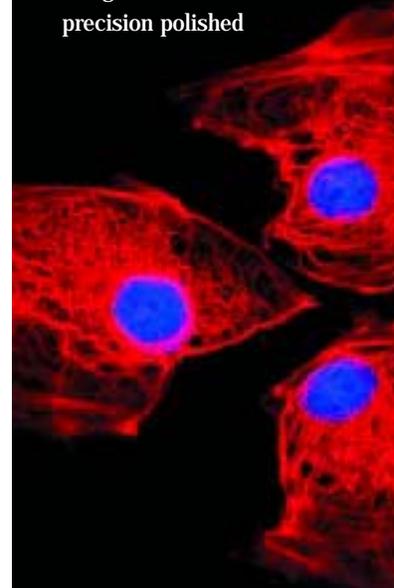

ALPHA bandpass designs

Dichroic Beamsplitters

Hard-surface & AR coated

Emission Filters

ALPHA bandpass/longpass designs are AR coated and precision polished

Vivid Plus Sets

Application

Bright signal & low auto-fluorescence for most fluorophores

Design Features

ALPHA Technology emission filters provide steep edges, increased blocking, and reduced auto-fluorescence

Excitation Filters

Bandpass designs

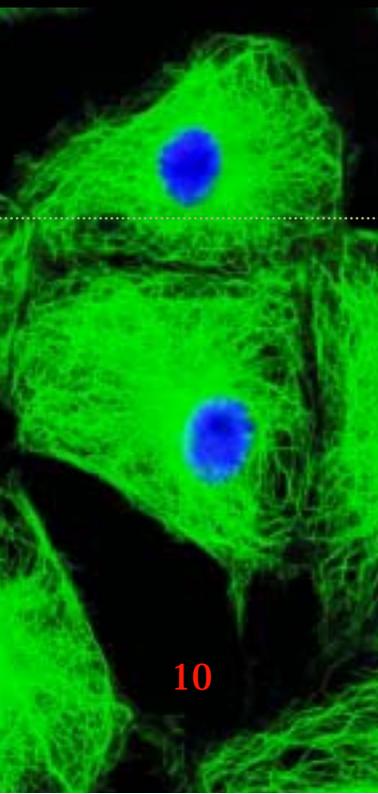

Dichroic Beamsplitters

Hard-surface & AR coated

Emission Filters

ALPHA bandpass/longpass designs are AR coated and precision polished

Emission Filters

Longpass Schott absorption glass designs are AR coated and precision polished

Omega Optical has an exclusive agreement with Quantum Dot Corporation for the development of filter sets optimized for the imaging of Qdot™ semi-conductor nanocrystals. These filter sets

Quantum Dot Sets

utilize emission filters centered on quantum dot emission center wavelengths. The result is bright signal and excellent signal-to-noise at an economical price, without utilizing more expensive, steep-edged filter components. This design strategy is possible as a result of the large Stokes shift inherent in quantum dot technology, differentiating it from filter set designs required for the closely spaced excitation and emission spectra of organic fluorophores.

		Dichroic	XF2001	400DCLP
		Emitter	XF3097	400ALP

Application

For imaging all UV-excited QDot conjugates

Design Features

Sets include a choice of two exciters, a single dichroic, and emitters optimized for each QDot

Excitation Filters

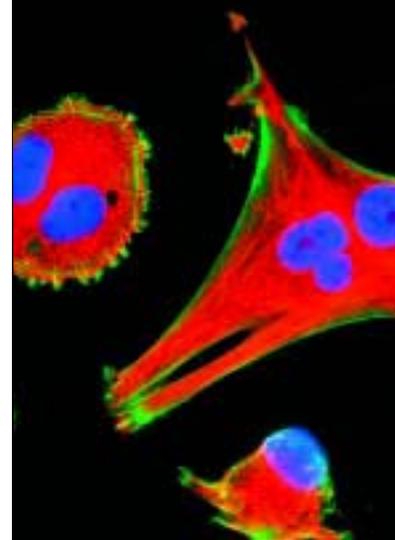

Wide-band excitation filter for maximum signal or narrower bandpass design to minimize photodamage

Dichroic Beamsplitters

Single dichroic functions for all colors

Emission Filters

Bandpass designs for high signal-to-noise and discrimination, are AR coated and precision polished

➤ Choose a fluorophore and a filter set using **Curvomatic**, our interactive database.

➤ Then simply order online.

See page 28.

Fluorescent Protein Sets

Omega Optical has developed filter sets exclusively for EGFP spectral mutants. Since their original cloning, these unique reporters have allowed researchers to visualize gene expression and intracellular protein localization in living cells. With the introduction of optimized spectral variants of fluorescent proteins, researchers now have the flexibility to use multiple fluorescent protein reporters.

Application

High signal-to-noise imaging applications

Design Features

ALPHA Technology excitation and emission filters provide steep edges, increased blocking, and reduced auto-fluorescence

Excitation Filters

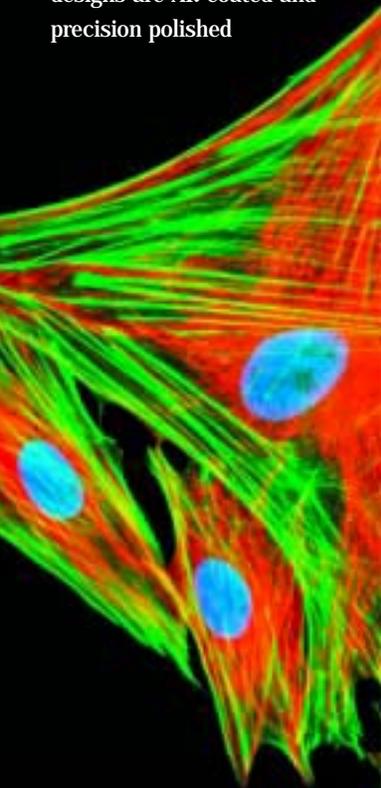

ALPHA bandpass designs

Dichroic Beamsplitters

Fluorescent Protein Multi-band Sets

Set #	Fluorophores	Application	Components		
			Type	Part #	Description
XF50	BFP / EGFP	Dual Band	Exciter	XF1048	400-500DBEX
			Dichroic	XF2041	385-502DBDR
			Emitter	XF3054	460-550DBEM
XF52	EGFP / DsRed2	Dual Band	Exciter	XF1050	490-550DBEX
			Dichroic	XF2043	490-550DBDR
			Emitter	XF3056	520-580DBEM
XF154	CFP / YFP / DsRed2	Triple Band	Exciter	XF1100	436-495-582TBEX
			Dichroic	XF2090	445-510-600TBDR
			Emitter	XF3118	465-535-640TBEM
XF135	CFP / YFP	Dual Band	Exciter	XF1078	436-510DBEX
			Dichroic	XF2065	436-510DBDR
			Emitter	XF3099	475-550DBEM

Fluorescence Resonance Energy Transfer determines proximity in a sample. Using EGFP spectral mutants provides the ability to localize and monitor ion-binding and molecular protein-protein interactions in living cells.

FRET Sets

Set #	Fluorophores	Application	Components		
			Type	Part #	Description
XF88-2	CFP / YFP	FRET	Exciter	XF1071	440AF21
			Dichroic	XF2034	455DRLP
			Emitter 1	XF3075	480AF30
			Emitter 2	XF3079	535AF26
XF89-2	BFP / EGFP	FRET	Exciter	XF1005	365WB50

			Dichroic	XF2034	455DRLP
			Emitter 1	XF3075	480AF30
			Emitter 2	XF3022	580DF30

Application

For determining physical proximity

Design Features

Multiple emission filters

Excitation Filters

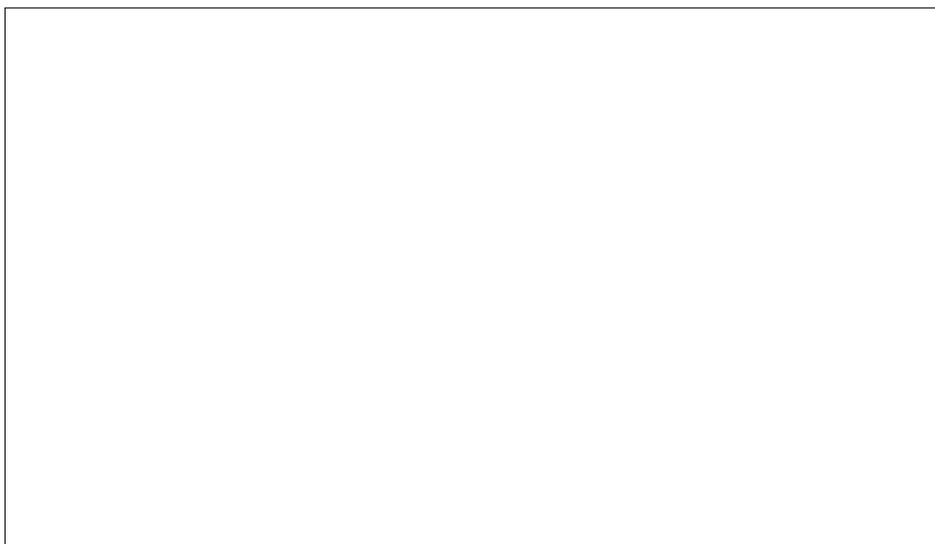

Bandpass designs

Dichroic Beamsplitters

Hard-surface and AR coated

Emission Filters

Bandpass designs

M-FISH Sets

M-FISH applications are utilizing an increasing number of probes. To maximize multi-color labeling, we have organized fluorophores into 10 different color groupings and designed sets for each group. Edges are steep and bandwidth is narrow allowing maximization of both emission energy and color discrimination. Recommended for CGH, SKY, and Co-localization studies.

Application

For maximizing multi-color labeling

Design Features

Filter edges are steep and bandwidth is narrow allowing maximization of both emission energy and color discrimination

Excitation Filters

Narrow bandpass designs to maximize discrimination

Dichroic Beamsplitters

Steep transition designs, hard-surface and AR coated

Emission Filters

Narrow bandpass designs to maximize discrimination

* **Zero Pixel Shift (ZPS) Sets:** A selection of filter sets are available in a Zero Pixel Shift (ZPS) option for those demanding multi-labeling applications that require critical registration. To order add ZPS to the filter set part number. There is an additional charge of \$100 for this option. The M-FISH ZPS sets are recommended for applications such as M-FISH (fluorescence *in situ* hybridization), CGH (comparative genomic hybridization), SKY (spectral karyotyping), and co-localization studies.

The Kaede filter set for fluorescence real-time imaging employs an optical marking technique useful for studying cell dynamics. Fluorescence from Kaede, a coral protein, changes from bright green to bright red when exposed to UV light. This filter set accommodates both green and red fluorescences as well as UV conversion. Designed in collaboration with Atsushi Miyawaki (R. Ando, et al., PNAS, 99(20), 12651-12656 (2002)).

Kaede Set

Part #	Fluorophores	Components		
		Type	Part #	Description
XF153	Green to Red Conversion	Exciter Red	XF1072	475AF20
		Exciter Green	XF1021	550DF30
		Dichroic	XF2038	430DRLP
		Emitter Red	XF3017	530DF30
		Emitter Green	XF3089	575ALP
		Conversion Exciter-UV R to G	XF1401	380DF30
Conversion Dichroic-UV R to G	XF2001	400DCLP		

Application

For real-time imaging

Excitation Filters

Two filters in an excitation filter wheel.

Dichroic Beamsplitters

Remains the same for both red and green fluorescence.

Emission Filters

Two emission filters in an emission filter wheel

Conversion Filters

UV excitation and dichroic filters for green and red

The Sedat filter sets are recommended for multi-color applications and result in minimal image shift and increased signal-to-noise in comparison to standard multi-band and Pinkel sets. Single band excitation and emission filters are normally installed in automated filter wheels with a stationary multiband dichroic in the microscope, for quick color changes. These sets were first conceived by Dr. John Sedat at UCSF.

Sedat Sets

		Emitter 3	XF3024	590DF35
		Emitter 4	XF3076	695AF55

Application

For multi-color imaging

Excitation Filters

Multiple single band filters in automated filter wheel.

Dichroic Beamsplitters

Stationary dichroic mounted in filter cube.

Emission Filters

Multiple single band filters in automated filter wheel

Ratio Imaging Sets

Single-dye sets are designed to achieve sensitive ratiometric measurements of indicator dyes and are divided into excitation and emission ratio imaging. For control measurement at dye's isosbestic point, please contact us.

Dual ratio imaging set is designed for simultaneous measurement of intracellular Ca⁺⁺ and pH. An extended-reflection longpass dichroic can accommodate dual exciters for both indicator dyes (Fura-2 and BCECF). Dichroic and emission filters are available individually for use with a monochromator.

Application

Ratiometric measurements of dyes

Design Features

Multiple excitation and multiple emission filter sets

Excitation Filters

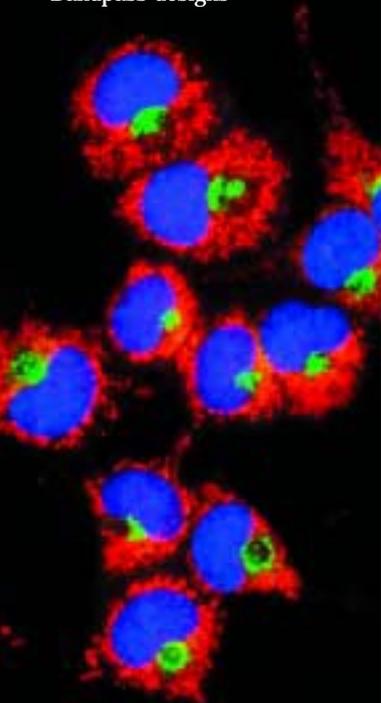

Bandpass designs

Dichroic Beamsplitters

Hard-surface and AR coated

Emission Filters

Bandpass designs

Caged Compound sets use extended reflection dichroics to enable the use of an uncaging filter and an excitation filter with the same dichroic. Both filters are mounted in a motorized filter wheel in the excitation path so that imaging can follow immediately after uncaging.

Caged Compound Sets

Set #	Fluorophores	Components		
		Type	Part #	Description
XF73-2	FITC	Uncaging Exciter	XF1001	330WB80
		Dye Exciter	XF1073	475AF40
		Dichroic	XF2031	505DRLPXR
		Dye Emitter	XF3084	535AF45

		Dichroic	XF2039	485-555DBDR
		Dye Emitter	XF3056	520-580DBEM
Extended Reflection Dichroic Only				
	FITC	Extended Reflection Dichroic	XF2031	505DRLPXR
	TRITC	Extended Reflection Dichroic	XF2032	565DRLPXR
	FITC / TRITC	Dual Dichroic with UV Reflection	XF2039	485-555DBDR

Application

UV excitation uncages fluorophores for controlled viewing

Excitation Filters

All excitation filters mounted in motorized filter wheel

Dichroic Beamsplitters

Extended reflection design mounted in conventional filter holder

Emission Filters

Mounted in conventional filter holder

Multiphoton filters are used in conjunction with two- and three-photon IR laser excitation of fluorophores for imaging deeper into samples with minimal photobleaching and photo-damage to cells. Call us for custom designs.

Multiphoton Filters

Component		
Part #	Type	Description
XF2033	Dichroic	675DCSPXR
XF3100	Laser Blocking Filter	710ASP

Application

Used in conjunction with two- and three-photon IR laser

Dichroic Beamsplitters

Extended reflection shortpass designs for tunable laser applications

Emission Filters

Deep laser blocking designs

➤ Choose a fluorophore and a filter set using **Curvomatic**, our interactive database.

➤ Then simply order online.

See page 28.

Multi-band Sets

Multi-band sets are used for multiple labeling and simultaneous viewing of multiple fluorophores. Each exciter, dichroic, and emitter has multiple isolated passbands of excitation and emission energy. Stock sets include dual, triple, and quadruple bandpass designs, and are available for a variety of applications. Omega is the co-holder of the patent on all multi-band filter designs.

Application

Simultaneous viewing of multiple fluorophores

Design Features

Dual, triple, & quad bandpass designs

Excitation Filters

Multi-band designs with multiple passbands and rejection bands

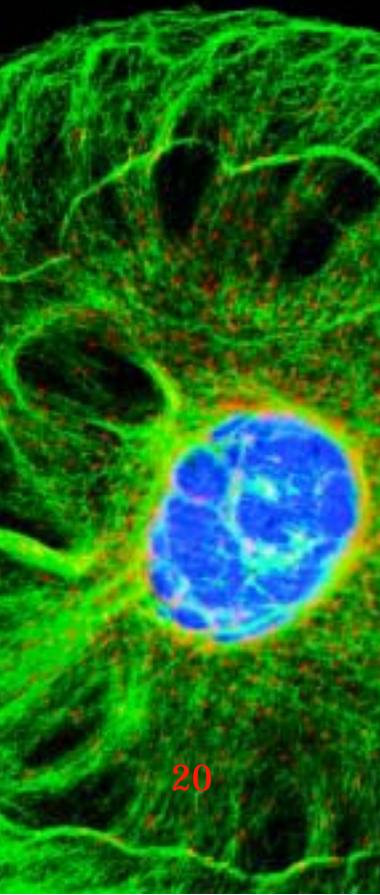

Dichroic Beamsplitters

Multi-band designs with multiple passbands and reflection bands

Emission Filters

Multi-band designs with multiple passbands and rejection bands

Pinkel sets, recommended for multi-color applications where discrimination is important, use a series of single exciters instead of multi-band excitation filters. The multiple excitation filters are mounted in a filter wheel or slider and are used in conjunction with multi-band dichroics and multi-band emission filters mounted in a cube to create composite images while minimizing registration shift that can result from changing single-dye sets. Developed in collaboration with Dr. Dan Pinkel at UCSF.

Application

For multi-color high discrimination applications.

Excitation Filters

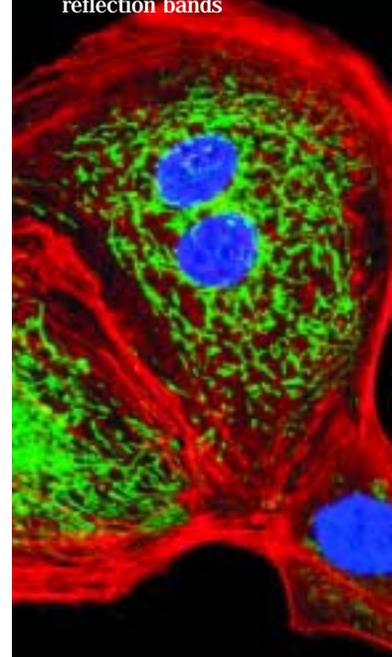

Multiple filters in filter wheel or slider

Dichroic Beamsplitters

Multi-band designs with multiple passbands and rejection bands

Emission Filters

Multi-band designs with multiple passbands and reflection bands

Filter Holders

Omega® Optical offers holders or cubes for the most common fluorescence microscopes offered by Leica, Nikon, Olympus, and Zeiss. We can mount filters either in a factory supplied holder or a customer supplied holder. In both cases, mounting is included in the price of the filter set. If it is determined that there is some difficulty involved in removing old filters from a customer supplied holder, there will be an additional mounting charge.

Set #	Microscope Manufacturer & Model	Exciter	Dichroic	Emitter
Nikon				
XC100	Original	18mm	18 x 26mm	18mm
XC101	Modified	20mm	18 x 26mm	22mm
XC102	Quadfluor	25mm	25.7 x 36mm	25mm
XC104	TE2000	25mm	25.7 x 36mm	25mm
Olympus				
XC110	IMT-2	22mm	21 x 29mm	20mm
XC111	BH2 (cube style—not barrel)	18mm	18 x 26mm	18mm
XC113	BX2 (BX, IX, AX)	25mm	25.7 x 36mm	25mm
XC114	CK-40	20mm	21 x 29mm	20mm
XC115	SZX-FL Stereo Exciter Holder (Holds 1 exciter filter)	25mm	N/A	N/A
XC116	SZX-FL Stereo Emission Holder (Holds 2 emission filters)	N/A	N/A	20mm
Leica				
XC120	Ploemopak	18mm	18 x 26mm	18mm
XC121	DM	22mm	21 x 29mm	22mm
XC122	DMIRB	20mm	18 x 26mm	20mm
XC123	DM4000, DM5000, DM6000	22mm	21 x 29mm	22mm
XC124	MZ FL III Stereo (Holds 2 emission filters)	18mm	N/A	18mm
Zeiss				
XC131	Axio Exciter Slider	18mm	N/A	N/A
XC132	Axioskop 2 (old)	25mm	25.7 x 36mm	25mm
XC133	Axiovert 3FL Slider	25mm	25.7 x 36mm	25mm
XC134	Axioskop 4FL Slider	25mm	25.7 x 36mm	25mm
XC135	Axioskop 6FL Slider	25mm	25.7 x 36mm	25mm
XC136	Axio 2 Push-and-Click	25mm	25.7 x 36mm	25mm
XC137	Axioskop 5FL Slider	25mm	25.7 x 36mm	25mm
XC138	Axioskop 8FL Slider	25mm	25.7 x 36mm	25mm
XC139	Standard 2FL Slider	25mm	25.7 x 36mm	25mm

Available in standard dichroic sizes and designed to function at 45 degree angle of incidence from 400–700nm. Performance in two planes of polarization can be very different. Mirrors minimize the impact on a randomly polarized sample.

Beamsplitters/Mirrors

Part #	Description	Application	Size
XF121	50/50 Beamsplitter	50%T, 50%R	Standard dichroic
XF122	70/30 Beamsplitter	70%T, 30%R	Standard dichroic
XF123	30/70 Beamsplitter	30%T, 70%R	Standard dichroic
XF125	Reflecting Mirror	Opaque backing prevents transmission, ≥90% Reflection	Standard dichroic

Note: Pricing is for standard microscope sizes. See page 22.

For reducing excitation energy.

* Included in the set of 6 filters; all individual items are included in the set of 12 filters.

- Choose a fluorophore and a filter set using **Curvomatic**, our interactive database.
 - Then simply order online.
- See page 28.

IR Blocking Filters

Used to reduce Infrared energy from the light source in the excitation path (XF83) or in front of the detector in the emission path (XF85 and XF86).

Part	Description	Application	Typical T%	Size
XF83	KG5	Blocks infrared energy at the light source	80% avg.	12R, 18R, 20R, 22R, 25R 32R, 45R, 50R, 50S
XF85	550CFSP	99+% Near IR Attenuation, 600-1200nm	>75%T	12R, 18R, 20R, 22R, 25R 32R, 45R, 50R, 50S
XF86	700CFSP	99+% Near IR Attenuation, 750-1100nm	>90%T	12R, 18R, 20R, 22R, 25R 32R, 45R, 50R, 50S

IR-DIC Filters

Used for simultaneous capture of fluorescence and infrared DIC images.

Part	Description	Application	Size
XF117/32R	780DF35	IR-DIC	32mm
XF117/45R	780DF35	IR-DIC	45mm

Polarizing Filter

Used to polarize incident light in both the excitation and emission path.

Part	Description	Size
XF120	Polarizing Filter	50 x 50 mm

Note: Custom sizes available; call our application specialists.

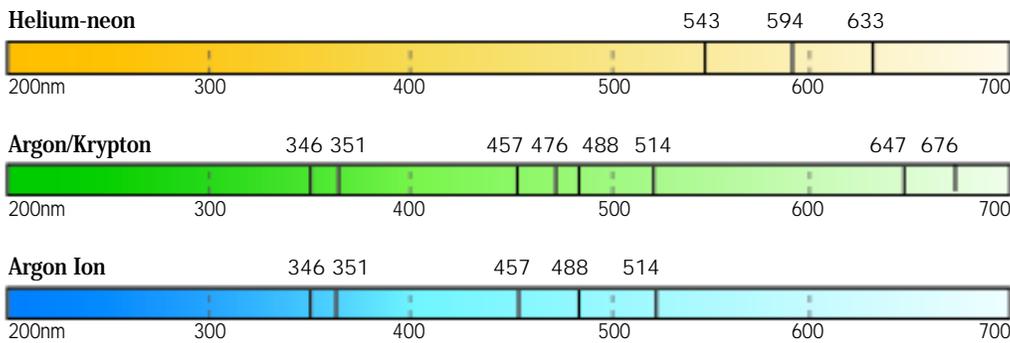

Fluorescence Reference Slides

Omega is offering Fluor-Ref slides to provide a quick, easy-to-use method of calibrating and standardizing fluorescence imaging systems. This set of slides helps to: center and adjust the fluorescence illuminator; verify uniformity of fluorescence staining; monitor and adjust laser output and PMT settings; and avoid microspheres and photobleaching.

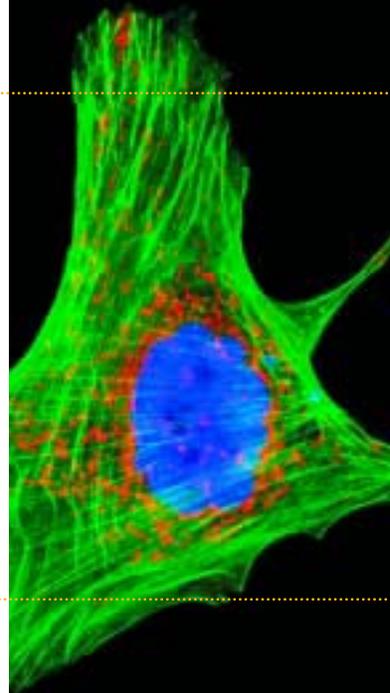

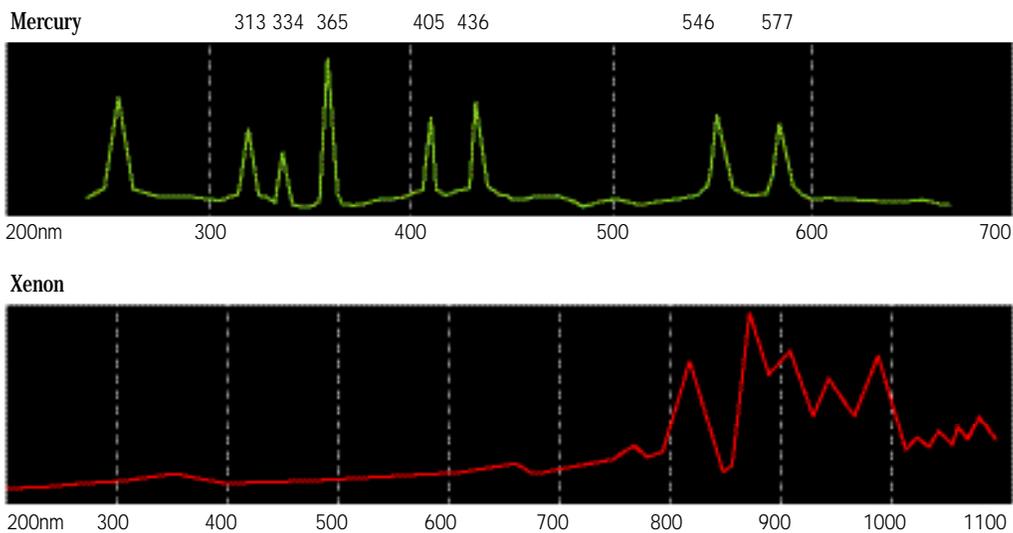

The set contains four slides with spectra approximating the most commonly used fluorophores: DAPI/Indo-1/Fura (Blue emission); FITC/GFP (Green emission); Acridine Orange (Yellow emission); and Rhodamine/Texas Red (Red emission).

Part #	Set of 4 Slides	Description
XF900	Blue emission Green emission Yellow emission Red emission	DAPI/Indo-1/Fura FITC/GFP Acridine Orange Rhodamine/Texas Red®

Lasers

Arc Lamps

For more detailed information and examples regarding the appropriate filters/sets for your light source and detector, consult our web site: www.omegafilters.com or contact one of our application specialists: (802) 254-2690 Toll Free: (866) 488-1064 email: labsales@omegafilters.com
